

ForageMax Products Protein Supplements Powered by Biuret

Reminder!! – Supplementing protein to cattle on poor to medium quality forages is a profitable practice because it increases the utilization and value of the base forage. Dr. Danny Simms in “Feeding the Beef Cowherd for Maximum Profit” states:

Feeding a protein supplement typically will increase both the intake and digestibility of the forages such as stover. The net effect is the additional energy, protein, etc., that cow receives is much greater than the levels of the nutrients in the supplement alone.

Economical Protein, Mineral, and Vitamin Supplementation

- Using biuret as a NPN and protein source, ForageMax products can provide the equivalent of .3 lb of protein plus salt, minerals and vitamins for **less than 40¢/day**
- Biuret is an effective, and safe source of NPN (non-protein nitrogen), which is converted into ammonia and then into protein in the rumen. The key is the difference in rumen ammonia levels. Compare the curves of urea, soybean meal and biuret below:

As Convenient as a Self-Fed Mineral

- Feeding rate is .20 to .50 lb/day
- Several day's supply can be put out at one time
- Weatherized, loose mineral type supplement
- Fed in mineral feeders

Excellent Late Summer and Fall Product – ForageMax can be fed at any time of year and in many different situations, but it fits very well as a supplement for cattle grazing corn or milo stocks, or fall pastures
